C. 1. SUBCELLULAR LOCATION: Type I membrane protein. Following proteclytical processing NICD is translocated to the nucleus.

C. 1. TISSUE SPECIFITY: Proliferating neuroepithelium.

C. 1. DEVELOPMENTAL STAGE: CNS development. This convertase in the which is proteclytically cleaved by a furin-like convertase in the trans-colgi network before it reaches the plasma membrane to yield an active, ligand-accessible form. Cleavage results in a C-terminal fragment W(TM) and a N-terminal fragment W(ES). Following ligand binding, it is cleaved by TNF-alpha converting enzyme (TACE) to yield a membrane-associated intermediate fragment called notch extracellular truncation (NEXT). This fragment called notch-derived peptide containing the intracellular domain (NICD) from the membrane.

C. 1. FIMILARITY: Belongs to the NOTCH family.

C. 1. SIMILARITY: Contains 3 Linkhotch repeats.

C. 1. SIMILARITY: Contains 3 Linkhotch repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-FROT entry is copyright. C. - PUNCTION: Functions as a receptor for membrane-bound ligands of Jagged2 and Delta! to regulate cell-fate determination. Upon ligand activation through the released notch intracellular domain (NICD) it forms a transcriptional activator complex with RBP-J kappa and activates genes of the enhancer of split locus. Affects the implementation of differentiation, proliferation and apoptotic programs (By similarity). May play a role during CNS development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SUBUNIT: Heterodimer of a C-terminal fragment N(TM) and a N-terminal fragment N(EC) which are probably linked by disulfide

DEBUTIFICATION OF LIGANDS.

WEDLINE=99180765; PubMed:10079256;
Gray G.E., Mann R.S., Mard D., Ish-Horowitz D., Carcangiu M.-L.,
Gray G.E., Mann R.S., Ward D., Ish-Horowitz D., Artavanis-Tsakonas S.;
Banks A., Leiman J., Ward D., Ish-Horowitz D., Artavanis-Tsakonas S.;
T. Human ligands of the Notch receptor.";
Am. J. Pathol. 154:785-794(1999)
L. Functions as a receptor for membrane-bound ligands
Jaggada, Jaggadz and Deltal to regulate cell-fate determination.
Upon ligand activation through the released notch intracellular
domain (NICD) it forms a transcriptional activator complex with
RBP-J kappa and activates genes of the enhancer of split locus.
Affects the implementation of differentiation, proliferation and
apoptoric programs (By similarity).

- SUBMINT: Heterodiane of a C-terminal fragment N(TM) and a N-
terminal fragment N(EC) which are probably linked by disulfide
bonds (By similarity).

- SUBGILLULAR LOCATION: Type I membrane protein. Following
proteolytical processing N(CD is translocated to the nucleus.

- TISSUE SPECIFICITY: Ubiquitously expressed in fetal and adult
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         which is proteolytically cleaved by a furin-like convertase in the which is proteolytically cleaved by a furin-like convertase in the trans-Golgin network before it reaches the plasma membrane to yield an active, ligand-accessible form. Cleavage results in a C-terminal fragment N(TM) and a N-terminal fragment N(EC). Following ligand binding, it is cleaved by TMP-alpha converting enzyme (TACB) to yield a membrane-associated intermediate fragment called notch extracellular truncation (NEXY). This fragment is then cleaved by presentlin dependent gamma-secretase to release a

Mencia is required for neurulation and commissure formation.";
Neuron 22:313-325(1999).
-!- FUNCTION: May be involved in microfilament assembly and cell
motility. Induces the formation of F-actin rich outgrowths in
fibroblasts. Required for neuralation and commissure formation.
C -!- SUBCELLULAR LOCATION: Localized to focal adhesions and, to a
lesser extent, leading edges and stress fibers.
C -!- ALTERNATIVE PRODUCTS:
Event-alternative splicing; Named isoforms=5;
Name=5; Synonyms-Mena++++;

FUNCTION: Hyperpolarization-activated ion channel exhibiting weak selectivity for potassium over sodium ions. Contributes to the native pacemaker currents in heart (1f) and in neurons (1h).

Produces a large instantaneous current. Activated by CAMP.

Produces a large instantaneous current. Activated by CAMP.

Produces a large instantaneous current. Activated by CAMP.

C. Insuration to more negative voltages (By similarity) heartivation to more negative voltages (By similarity).

C. Insuration complex of pore-forming subunits. Heteromultimer with HCNI. Interacts with KCNE2 (By similarity).

C. Insuration complex of pore-forming subunits. Heteromultimer with HCNI. Interacts with KCNE2 (By similarity).

C. Insuration layers in heart.

C. Insuration layers in heart.

C. Indianate of the probably the voltage-sensor and is characterized by a series of positively charged amino acids at every third position.

C. Indianate layers in the potassium channel family. HCN

SUMILARITY: Belongs to the potassium channel family. HCN

                                                                                                                                                                                                                                                                                                                                                                                                             -!- FUNCTION: Potential Ras effector protein. May function as a guanthe mucleotide exchange (GEF), by exchanging bound GDP for free GTP (By similarity).
-!- SUBDNIT: Interacts with RASEB (By similarity).
-!- SIMILARITY: Belongs to the RIN (Ras interaction/interference)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

-:- TISSUE SPECIFICITY: During development it is expressed in subregions of the nervous system and is particularly prominent in macle. In adulthood, it is expressed ubiquitously.
-:- SIMILARITY: Belongs to the semaphorin family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           YNYLSTDVGSCTLVCPLHNQEVTAEDGTQRCEKCSKPCARGTHSLLPRPAAVPVPLRMQP 360
of the alternative transcript is a truncated HER-2 protein designated BGHER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains ECD i. I of the p185HER-2 and the novel ECDIII. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the ECDIIIA-containing polypeptides which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein shown in the specification but is derived from p68HER-2 generic sequence (SEQ ID NO:2) shown in the sequence listing (AAE09181)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        361 XPAHPVLSFIRPSWDXVSAFYSLPLAPLDPTSVXISPVSVGRGXDPDAHVAVNLSRYEG 419

The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product

                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel HER-2 (herstatin-2) antagonist

particularly a polypeptide that binds to the extracellular domain (ECD)

of HER-2 at a site that is different from the binding site of humanised

antibody, Herceptin, at an affinity of at least 10'8. The present

invention is based upon the initial discovery of an alternative HER-2

mRNM transcript with 274 bp insert of intron 8. The translation product

of the alternative transmenting at runoated HER-2 protein designated

p68HER-2 which lacks the transmembrane and intracellular domains of

the HER-2 but cortains ECD I II of the p18HER-2 and the novel ECDIIIa.

The ECDIIIA-containing Polypeptides bind tightly to, and thus antagonise

the HER-2 receptor. The peptides bind tightly to, and thus antagonise

cucleic acids encoding these are useful to treat, diagnose and identify

solid tumours. The present sequence is human p68HER-2 generic protein

shown in the specification but is derived from p68HER-2 generic sequence

(SEQ ID NO:2) shown in the sequence listing (AAE09181)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ő

                                                                                                                                                         Region
The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody. Herceptin, at a different from the binding site of humanised antibody. Herceptin, at a different from the binding site of humanised antibody. Herceptin, at a different site of the present in the based upon the initial discovery of an alternative HER-2 mRMA transcript with 274 bp insert of intron 8. The translation product of the alternative transmembrane and intracellular domains of p185HER-2 but contains FCD I. II of the p185HER-2 and thus antagonise the ECDIIIA-containing FCD I. II of the p185HER-2 and thus antagonise the ECDIIIA-containing FCD I. II of the p185HER-2 and thus antagonise the ECDIIIA-containing FCD I. II of the p185HER-2 and thus antagonise containing FCD II and the sequence is human p68HER-2 generic protein shown in the specification but is derived from p68HER-2 generic sequence is not shown in the specification but is derived from p68HER-2 generic sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10 %. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron %. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of
                                                                                                                                                                                                                                                            Incres "Represented as Agn in the parent sequence shown in the specification" % \left\{ 1\right\} =\left\{ 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   in the parent sequence shown

p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. The ECDIIIA. Concaining polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence. Note: The present sequence is not shown in the specification but is derived from p68HER-2 generic sequence (SEQ ID NO:2) shown in the sequence listing (AAE09181) 8888888888888

particularly a pollypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10'8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and then uncleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence. Note: The present sequence is not shown in the specification but is derived from p68HER-2 generic sequence is not (SEQ ID NO:2) shown in the sequence listing (AABD9181) New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors. generic sequence (AAE09181) Xaa Ile" The invention relates to novel HER-2 (herstatin-2) antagonist /note= "p68HER-2 substituted with ď, .abel= Unknown Example 11; Page; 61pp; English. label= Unknown 'label= Unknown /label= Unknown /label= Unknown label= Unknown (UYOR-) UNIV OREGON HEALTH SCI Evans 16-FEB-2001; 2001WO-US005327. 16-FEB-2000; 2000US-00506079. label= label= Henner WD, WPI; 2001-529934/58.                                                     The present invention relates to a method for treating a solid tumour characterised by endothelial growth factor receptor (EGPR) expression. The method involves administering an agent that binds to an extracellular domain (ECD) of EGFR. The invention also relates to a naturally occurring inhibitor of HER-2 receptor tyrcsine kinase called herstatin. The corpression of herstatin with plashERZ causes a striking reduction in cell growth that corresponds with suppression of pl85 autophosphorylation. The method or a pharmaceutical composition is useful for treating a solid cumour (selected from gramous cell carcinoma, lung carcinoma, calmon carcinoma and glial cell tumour) characterised by EGFR expression. The present sequence is human truncated HERZ protein that lacks transmembrane

New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.

Example 11, Page, 61pp, English.

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transmandmena and intracellular domains of p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. The HER-2 receptor. The peptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence. Note: The present sequence is not shown in the specification but is derived from p68HER-2 generic sequence (SEQ ID NO:2) shown in the sequence listing (AAB09181)

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (BCD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transmembrane and intracellular domains of PBSHRR-2 but contains BCD I. II of the p185HER-2 and the novel BCDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the ECDIIIA-containing polypeptides, which bind to an HER-2 ECD, and the novel BCDIIIa concleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein shown in the specification but is derived from p68HER-2 generic sequence (SEQ ID NO:2) shown in the sequence listing (AAE09181)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
antibody, Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 manks transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designanced p68HER-2 which lacks the transmembrane and intracellular domains of p188HER-2 which lacks the transmembrane and intracellular domains of The ECDIIIA-containing DCDI, II of the p189HER-2 and the novel ECDIIIa. The PECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tuncours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence. Note: The present sequence is not shown in the specification but is derived from p68HER-2 generic sequence (SEQ ID NO:2) shown in the sequence listing (AAE09181)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAGCTGPKHSDCLACLHFNHSGICELHCPALVTYNTDTFESMPNPEGRYTFGASCVTACP 300

The present invention is based upon the initial discovery of an alternative HER-2 of the alternative transcript is a truncated HER-2 protein designated of the alternative transcript is a truncated HER-2 protein designated psEHER-2 but contains ECD I, II of the pl85HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the models caids encoding these are useful to treat, diagnose and identify soll tumorurs. The present sequence is human p68HER-2 protein containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    which binds to the extracellular domain of HER-2

characterial resactors to where nower increase its analogomists of HER-2 at a site that is different from the binding site of humanised at the fareability at polypeptide that binding to the extracellular domain (BCD) of HER-2 at a site that is different from the binding site of humanised and thereoform, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 mena transcript is a truncated HER-2 protein designated of the alternative transcript is a truncated HER-2 protein designated p88HER-2 but contains BCD I, II of the p185HER-2 and the novel ECDIIIa. The HER-2 receptor. The peptides bind tightly to, and thus anagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence. Note: The present sequence is not shown in the specification but is derived from p68HER-2 generic sequence is not shown in the specification but is derived from p68HER-2 generic sequence. (SEQ ID NO:2) shown in the sequence listing (AAE09181)

The invention relates to novel HER-2 (herstatin-2) antagonist

particularly a polypeptide that binds to the extracellular domain (ECD)

of HER-2 at a site that is different from the binding site of humanised

antibody, Herceptin, at an affinity of at least 10.8. The present

invention is based upon the initial discovery of an alternative HER-2

mRNA transcript with 274 bp insert of intron 8. The translation product

of the alternative transcript is a truncated HER-2 protein designated

pSHER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa.

The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise

the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the

nucleic acids encoding these are useful to treat, diagnose and identify

solid tumours. The present sequence is human p68HER-2 generic protein

containing ECDIIIa variant sequence. Note: The present sequence is not

shown in the specification but is derived from p68HER-2 generic sequence

(SEQ ID NO:2) shown in the sequence listing (AAE09181)
New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

```

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transmembrane and intracellular domains of ph89HER-2 but contains ECD I. Il of the pl89HER-2 and thus antagonise the ECDIIA-containing polypeptides bind tightly to, and thus antagonise the ECDIIA-containing polypeptides bind tightly to, and thus antagonise the ECDIIA-containing polypeptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIA-contain but is educated from p68HER-2 generic sequence is not shown in the specification but is derived from p68HER-2 generic sequence (SEQ ID NO:2) shown in the sequence listing (AAE09181)

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p58HER-2 but contains ECD i, II of the p185HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa equence. Note: The present sequence is not shown in the specification but is derived from p68HER-2 generic sequence is not shown in the sequence listing (AABO9183)
                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                              /note= "p68HER-2 generic sequence (AAE09183) Xaa

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a solid that is different from the binding site of humanised antibody. Herceptin, at an affinity of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transments and intracellular domains of passents, which lacks the transmentane and intracellular domains of passents, but contains ECD I. II of the plasses, and the novel ECDIIIA. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the ECDIIIA-containing polypeptides bind tightly to, and thus antagonise of the ECDIIIA-containing polypeptides, which bind to an HER-2 ECO, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein shown in the specification but is derived from p68HER-2 generic sequence (SEQ ID NO:2) shown in the sequence listing (AAE09181) polypeptide, which binds to the extracellular domain of HER-2 for the  $t\tau ment$  of hard tumors. New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.

Example 12; Page; 61pp; English.

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody. Herceptin, at an affinity of at least 10 %. The present invention is based upon the initial discovery of an alternative HER-2 mink transcript with 274 bp insert of intron 8. The translation product of the alternative transmembrane and intracellular domains of p8HER-2 which lacks the transmembrane and intracellular domains of the ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides which bind to an HER-2 ECD, and the uncleic acids encoding these are useful to treat diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIII variant sequence. Note: The present sequence is not

shown in the specification but is derived from p68HER-2 generic sequence (SEQ ID NO:2) shown in the sequence listing (AAE09181) ន្តន្តន្ត

THER-2/new (erbB-2) oncogene encodes a receptor-like tyrosine kinase. The extracellular domain of pl85+BER-2 is proteolytically shed from breast carcinoma cells in culture and is found in serum of some cancer patients and may be a serum marker of metastatic breast cancer. An alternative HER cancer and intron is in-frame and encodes a 79 amino acid extension designated ECDIIIa (the present sequence), which is inserted at residue concern (approximately 86 kDa) that lacks the transmembrane and circumative mRNA predicts a truncated HER-2 concern (approximately 86 kDa) that lacks the transmembrane and intronising (see AAY97240). ps8HER-2 specifically binds to pl85-HER-2 without activating HER-2. It could therefore block dimerization of the site of binds to a site on the ECD of HER-2 that is different from the site of binds to a site on the ECD of HER-2 cancer and binds to the ECD of HER-2). The methods, compositions, polypeptides and antibodies are used to treat solid tumours such as concer and antibodies are used to treat solid tumours such as concern especially where over-expression of HER-2 is indicated Using polypeptides and antibodies that bind to the extracellular domain of the receptor-like tyrosine kinase HER-2 to treat solid tumors of the breast, lung, ovaries and colon.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DPLXXITPVIGASPGGLRSLQLRSLTBCLKGGVLIQRNPQLCYQDTILWXDIFHKNNQLA 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody. Herceptin, at an affinity of at least 10%. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated pEBHER-2 which lacks the transmembrane and intracellular domains of pl85HER-2 but contains BCD 1, II of the pl85HER-2 and the novel ECDIIIa. The HER-2 receptor. The peptides bind tightly to, and thus aneagonise nucleic acids encoding these are useful to treat, diagnose and identify solld tumours. The present sequence is human p68HER-2 protein containing ECDIIIa generic sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LILIDINRSRACHPCSPMCKGSRCWGESSEDCQSLIRIVCAGGCARCKGPLPIDCCHEQC 240

particularly a polypeptide that binds to the extracellular domain (BCD) of HER-2 at a site that is different from the binding site of humanised anticody, Herceptin, at an affinity of at least 10% The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated of BHBRR-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains BCD I, II of the p185HER-2 and the novel BCDIIIa. The BCDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p66HER-2 generic protein containing BCDIIIa variant sequence. Note: The present sequence is not shown in the specification but is derived from p68HER-2 generic sequence is not shown in the sequence listing (AAE09183)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DPLNNTTPVTGASPGGLRELQLRSLTEILKGGVLIQRNPQLCYQDTILWKDIFHKNNQLA 180

                                                                                                                                                                            ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel HER-2 (herstatin-2) antagonist
particularly a polypeptide that binds to the extracellular domain (ECD)
of HER-2 at a site that is different from the binding site of humanised
antibody, Herceptin, at an affinity of at least 10'8. The present
invention is based upon the initial discovery of an alternative HER-2
mENA transcript with 274 bp insert of intron 8. The translation product
of the alternative transcript is a truncated HER-2 protein designated
p68HER-2 but contains ECD i, II of the p185HER-2 and the novel ECDIIIa.
The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise
the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the
nucleic acids encoding these are useful to treat, diagnose and identify
solid tumours. The present sequence is human p68HER-2 generic protein
containing ECDIIIa variant sequence. Note: The p68HER-2 generic sequence
shown in the specification but is derived from p68HER-2 generic sequence
(SEQ ID NO:13) shown in the sequence listing (AAE09183)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.

The invention relates to a method for treating cancer in a human patient, wherein the cancer expresses epidermal growth factor receptor (BGPR), comprising administering an antibody which binds Erbb2 (HBR2; AAB60408). In particular, the anti-Erbb2 antibody is the murine monoclonal antibody 2C4 (AAB60396, AAB60397) or a humanised version of 2C4 (AAB60398,
                                                                                              Anti-ErbB2 monoclonal antibody 2C4; HER2; mouse; murine; humanised; VL; light chain variable region; cancer; cytostatic; BGFR-expressing cancer; epidermal growth factor receptor; colon cancer; rectal cancer; tumour; colorectal cancer; non-small cell lung cancer; metastatic breast cancer; affinity purification.
                                                                                                                                                                                                                                                                                                                                                                                                                                           Treating cancer in a human, where the cancer expresses epidermal growth factor receptor (EGFR), comprises administering an antibody which binds ErbB2.

CC AAB60399). The invention also encompasses an isolated nucleic acid encoding a humanised ErbE2-binding antibody; weetors and host cells comprising such nucleic acids, the recombinant production of a humanised ErbE2-binding antibody, and an immunoconjugate comprising a humanised ErbE2-binding antibody and a cytotoxic drug. The BrbE2-binding antibodies act by antagonising ErbE receptors, and as inhibitors of transforming growth factor alpha (TGF-alpha)-activated mitogen activated protein kinase (MAPK). The method of the invention is used for treating cancer, especially colon cancer, rectal cancer, colorectal cancer, lung cancer (especially colon cancer, rectal cancer), or breast cancer (especially mon-small cell lung cancer), or breast cancer (especially metastatic breast cancer). The antibodies may also have non-therapeutic uses e.g., as affinity purification agents. Using an antibody which binds to ErbE2 to treat cancer is preferable to the use of EGFR-targetted drugs, as EGFR is also highly expressed in other tissues such as the liver and skin, where the active drug will also bind, with skin toxicity having been observed for EGFR-targetted drugs. Antibodies which bind ErbE2 are anticipated to have a better safety profile than such drugs.

The present sequence represents human ErbE2

The ErbB family of receptor tyrosine kinases are important mediators of cell growth, differentiation and survival. The receptor family includes four distinct members including Epidermal Growth Factor Receptor (EGFR or ErbB1), HER2 (ErbB3) and Her4 (ErbB4 or tyro2). The present invention relates to a method for treating prostate cancer. The method comprises administering an antibody which binds ErbB2 and blocks ligand activation of an ErbB receptor. Preferably, the antibody blocks binding of monoclonal antibody 2C4 to ErbB2 and/or blocks diamongle antibody 2C4 to ErbB2 and/or blocks diamongle activation of mitogen-activated protein kinase (MAPK). The present sequence is the extracellular domain of human ErbB2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DPLNNTTPVTGASPGGLRELQLRSLTEILKGGVLIQRNPQLCYQDTILWKDIFHKNNQLA 180

1. .21 /label= Signal\_peptide Location/Qualifiers

Determining an analyte in the presence of an interfering substance, comprises contacting a sample with an antibody recognizing analyte coated surface and interfering substance, and measuring unbound and bound WPI; 2002-697507/75.

Example 1; Fig 1; 16pp; English.
